Unveiling the physics behind extreme AGN variability
10-14 July 2017 St. Thomas (U.S. Virgin Islands)

Active Galactic Nuclei (AGN)

- **Unified model of AGN (Antonucci 1993, Urry & Padovani 1995):**
 - Some subclasses do not fit within the UM (Ho 2008)
- **Our work: Optically selected ($z < 0.05$):**
 - Type 1.8, 1.9, and 2 Seyferts (Seyfert 1943)
 - Low Ionization Nuclear Emission Line Regions (LINERs, Heckman 1980)

Credit: Beckmann & Shrader (2012).

Active Galactic Nuclei (AGN)

- **Unified model of AGN (Antonucci 1993, Urry & Padovani 1995):**
 - Some subclasses do not fit within the UM (Ho 2008)
- **Our work: Optically selected ($z < 0.05$):**
 - Type 1.8, 1.9, and 2 Seyferts (Seyfert 1943)
 - Low Ionization Nuclear Emission Line Regions (LINERs, Heckman 1980)

X-rays

- Produced close to the SMBH
- Smaller effect of obscuration than at UV, optical or near-IR frequencies

Chandra: High spatial resolution

XMM-Newton: High sensitivity

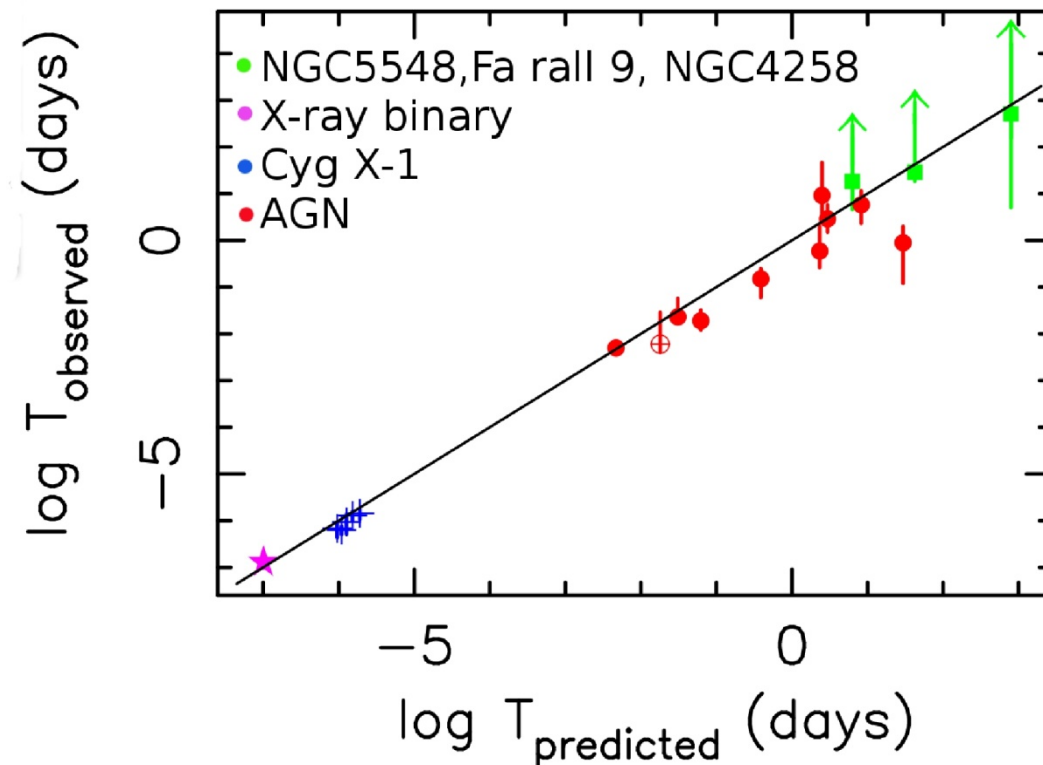

Variability

- **It is a general property of AGN (Peterson et al. 1997)**
- **In Seyfert galaxies in the 60s at optical frequencies (e.g. Fitch et al. 1967)**
- **X-ray variability using *OSO-7*, *UHURU* and *Copernicus* in timescales from hours to years**
- **Physical origin related to:**
 - **Variations in the accretion rate (Uttley et al. 2005, McHardy et al. 2010)**
 - **Clouds intersecting the the line of sight (Risaliti 2002, Puccetti et al. 2007)**

Variability

- LINERs were supposed to be non-variable (Ptak et al. 1998)
- At UV frequencies 14 out of 17 varied in timescales from months to years (Maoz et al. 2005)
- At X-rays:
 - Two out of four vary (Pian et al. 2010)
 - Seven out of nine type 1s varied (Younes et al. 2011)
 - NGC 4102 varied at soft energies (González-Martín et al. 2011)
- McHardy et al. (2006) found a “variability plane” :

McHardy et al. (2006)

$$\log (T_B) = 2.1 \log (M_{BH}) - 0.98 \log (L_{bol}) - 2.32$$

Sample selection

Observations of the same source taken at different dates

from the public archives of *Chandra* and/or *XMM-Newton*

Methodology

- **Individual fit: González-Martín et al. (2009)**
- **Different models are used to fit the spectra :**
 - ME
 - PL
 - MEPL
 - 2PL
 - ME2PL
 - 2ME2PL

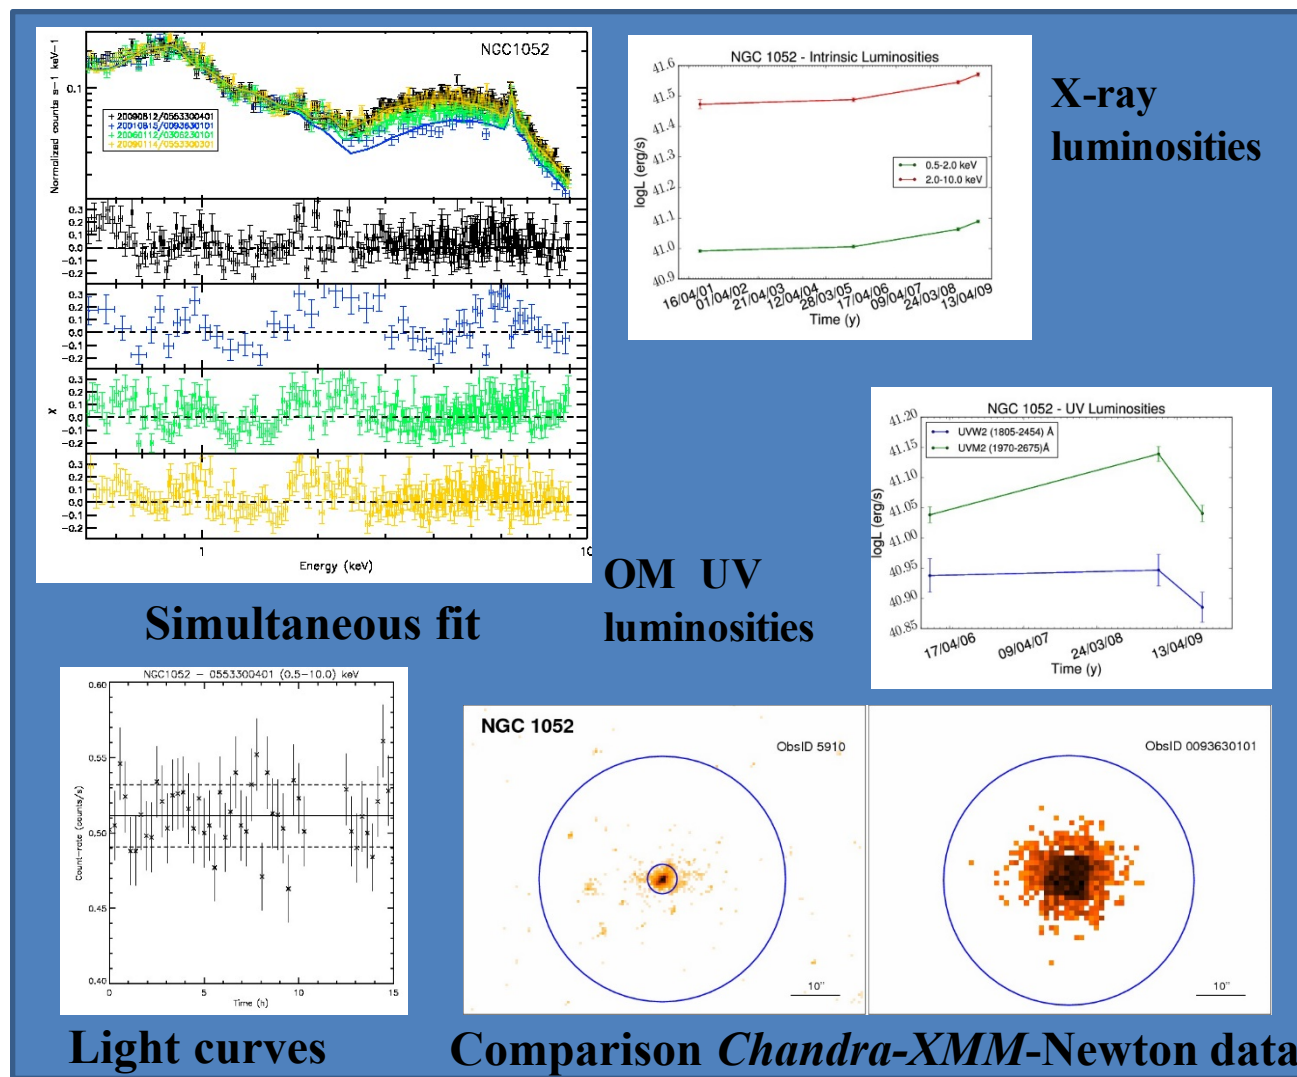

González-Martín et al. (2009)

Methodology

- **Simultaneous fit: fit spectra of the same object with the same model**
- **Vary parameters: N_{H1} , N_{H2} , kT , Γ , $Norm_1$, $Norm_2$**
- **We obtain the nature of the observed long-term variations (months/years)**

NGC 1052

Methodology

NGC 1052

- **Additionally:**
 - Short-term variations from the light curves (days/weeks)
 - UV flux variability
 - Comparison between *Chandra* and *XMM-Newton*

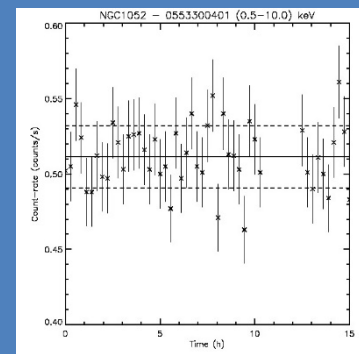

Simultaneous fit

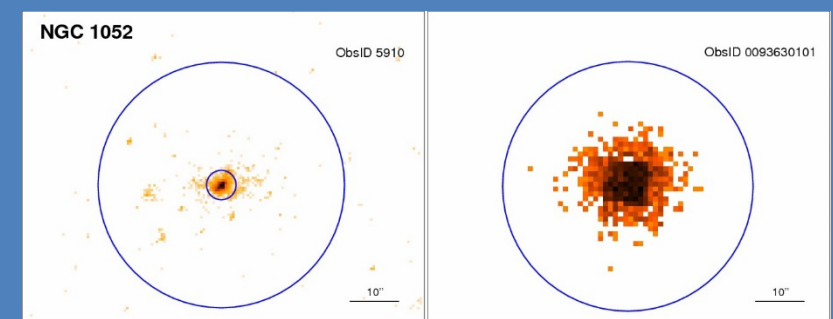

X-ray luminosities

OM UV luminosities

Light curves

Comparison *Chandra*-*XMM-Newton* data

Results: LINERs

- **17 LINERs from the Palomar sample (Ho et al. 1997) or González-Martín et al. (2009):**
 - **Two Compton-thick candidates, i.e. $N_{\text{H}} > 1.5 \times 10^{24} \text{ cm}^{-2}$**
- **No short-term variations**
- **No differences in type 1 / type 2**

*Published in
Hernández-García et al. (2013, 2014)*

Results: LINERs

- **Variability:**
 - Eight out of 13 variable at X-rays
 - Five out of six vary at UV
 - **11/14 variable (months/years)**
- **Long-term X-ray variability pattern:**
 - Intrinsic variations: 8 cases
 - Column density: 1 case
- **Fit into the “variability plane” (McHardy et al. 2006)**

Results: Seyfert 2

- **26 Seyfert 2 from the Véron-Cetty and Véron (2010) catalogue:**
 - **12 Compton-thick candidates**
 - **12 Compton-thin**
 - **Two changing-look candidates** (i.e. transitions from Compton-thin to Compton-thick)
- **No short-term variations**
- **No UV variations**

*Published in
Hernández-García et al. (2015)*

Results: Seyfert 2

- **11 out of 25 vary at X-rays**
 - **Nine Compton-thin**
 - **Two changing-look**
 - **None Compton-thick**
- **Long-term X-ray variability pattern:**
 - **Intrinsic variations of the source : 9 cases**
 - **Variations of the column density: 4 cases**

Results: Seyfert 1.8 and 1.9

- **15 Seyfert 1.8/1.9 from the Véron-Cetty and Véron (2010) catalogue:**
 - **No Compton-thick candidates**
 - **13 Compton-thin**
 - **Two changing-look candidates**
- **No differences in type 1.8/1.9**

*Published in
Hernández-García et al. (2017)*

Results: Seyfert 1.8 and 1.9

- **Variability:**
 - All the 15 variable in long-term at X-rays
 - Six out of eight show short-term X-ray variations
 - Seven out of nine vary at UV
- **Long-term X-ray variability pattern:**
 - Intrinsic variations of the source : 10 sources
 - Variations of the column density: 7 sources
 - Variations at soft energies: 5 sources

*Published in
Hernández-García et al. (2017)*

Summary of the variations

	LINERs	Seyfert 2	Seyfert 1.8/1.9
Short-term X-ray	No	No	Yes
Long-term X-ray	Yes	Yes	Yes
Variable parameters	Norm ₂ (N _{H2} in one case)	Norm ₂ , N _{H2}	Norm ₂ , N _{H2} , Norm ₁
UV	Yes	No	Yes

Summary of the variations

	LINERs	Seyfert 2
Short-term X-ray	No	No
Long-term X-ray	Yes	Yes
Variable parameters	Norm ₂	Norm ₂ ,
	(N _{H2} in one case)	N _{H2}
UV	Yes	No

Different X-ray luminosities

Same variations independently of the accretion mechanism (Lyubarskii 1997)

Lack of the torus and BLR? (Elitzur & Slosman 2006)

Comparison published in Hernández-García et al. (2016)

Summary of the variations

		Seyfert 2	Seyfert 1.8/1.9
Short-term X-ray	Different N_H	No	Yes
Long-term X-ray	Different behaviour at X-rays and UV	Yes	Yes
Variable parameters		Norm ₂ , N_{H2}	Norm ₂ , N_{H2} , Norm ₁
UV	Do not include Seyfert 1.8/1.9 as Seyfert 2!	No	Yes

Comparison published in Hernández-García et al. (2017)

Future work

- **Apply the methodology to samples of type 1 AGN from the Veron catalogue:**
 - **15 Seyfert 1.5 and 8 Seyfert 1.2**
 - **20 Narrow Line Seyfert**

The background is a complex, abstract composition of swirling, textured lines in various colors including dark blue, teal, green, orange, and purple. The lines are thick and layered, creating a sense of depth and movement. In the bottom right corner, there is a cluster of soft, glowing, light blue and purple shapes that resemble clouds or bubbles. The word "Thanks!" is written in a white, serif font with a subtle yellow glow, positioned in the upper right quadrant of the image.

Thanks!
